

## Custom Deck Rails

...Set your deck apart

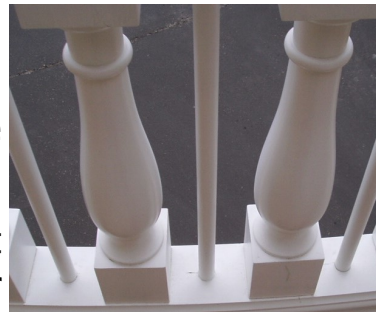

**Summertime** is all about exterior living and entertaining outdoors. We specialize in customization to spruce up any deck!

Here are some examples of projects we have done in the past:

The left picture above is a **twisted radius** rail for a curved staircase. To help us quote a twisted radius, send us the height measurements of both ends of the rail and the radius of the curve.

The **radius deck** rail (above right) is also a very popular request. All we need is the deck measurements with the radius and offset for the location of the rail. If you know which baluster will be used, we can calculate the baluster count for you, ensuring the 4" ball rule will be met for code requirements.

With code in many locations being 42" height for deck railing and 36" height for stair

railing, we can customize a **gooseneck rail** to accommodate this elevation change.

What if your customer has a baluster they want to **match**? Send us a detailed drawing or photo with measurements, or even an existing baluster you are replacing, along with your quote request. If you can send us a baluster in good condition that we could use as a master, replicating costs can be kept even lower.

To assist with installation, we can have your railing and balusters **pre-assembled** as well as **pre-finished** in the color of your choice. If interested, make sure to add that to your quote request.

**Contact us for all your customization requests at 1-800-685-9981.**

Follow us on Facebook and Instagram for pictures, information and projects.
